

Instructions for 'gransim2D-linux' on Linux

1. Download 'gransim2D-linux.tar'.
2. Open a Terminal window
3. Untar it: **tar -xvf gransim2D-linux.tar**
4. Go to the directory created: **cd gransim2D-linux**
5. Run the model with default options: **./run-model**

There will be 2 windows, one with model controls and one showing the model simulation space.

Since these may be hidden by other windows, you can minimize other windows to reveal them.

See file README.txt for more information and how to run the model with different options.
